

DAN BRIEF

June 2009

WORLD ECONOMIC CRISIS

There are few better ways to reduce operating costs than to automate some of the MUST-DO's in your organisation. Installing automated data monitoring that delivers essential data routinely, to your desk is proving to be a WINNER with many companies in today's challenging economic times. Talk to Data Acquisition Networks today about how you can automate and improve your data collection.

DAN LAUNCHES D132

Data Acquisition Networks has a growing range of products that are proving to be 'winners' in almost every data monitoring application. DAN has recently released the new D132 which in its base form can take 32 digital inputs and store data for onsite retrieval. This does not mean DAN is moving away from its commitment to web-based monitoring but rather, that a market exists for a low-cost and reliable unit that provides a local digital display. It also illustrates how **DAN is prepared to work with customers to develop specific solutions.**

DATA TRANSFER TRIFECTA

Data Acquisition Networks has recently added 3-G capability to its data transfer options meaning data can now be collected and sent by **GPRS, Satellite and 3-G**. DAN is committed to providing the most flexible and most **comprehensive web-based monitoring systems that can be installed and operated at the least cost**. There is no location around Australia or internationally where DAN is unable to provide data monitoring and transfer.
