

# DAN BRIEF

September 2009

## Food Storage Monitoring

The use of DAN monitoring equipment to record food storage temperatures is growing rapidly as food providers with a commitment to food quality and food safety install automated monitoring equipment. For some it can be difficult and even threatening to commit to automated monitoring of their food storage areas as it subjects their processes and procedures to more reliable and more routine scrutiny whereas for others, **using data objectively is seen as a way to improve performance.** The feedback we are receiving from customers that are installing **DAN Food Monitoring Equipment** is that they are very proud to be taking positive action and improving the quality and rigor of their food safety programs.

### DAN = FLEXIBLE MONITORING

Whilst use of DAN Monitoring Equipment is growing rapidly for food storage we continually remind our customers that DAN equipment can take input from almost any industrial probe and therefore has a multiplicity of monitoring uses. DAN monitoring equipment is currently being used to monitor such variable applications as trade waste, the environment, food processing, swimming pools, estuarine quality, tank-levels, agriculture, utilities and cooling towers just to mention a few. DAN has also developed a number of customised solutions for customers. **If you believe you can improve your business by understanding the facts then give DAN a call!**
